Experience

Junior database software developer

Advisor Systems Sp. z o.o. May 2021 - July 2021

Customization of customer applications or general version of the program. Mainly adding new fields, conditions or modifying them.

Web developer

ZawTyp Sp. z o.o. July 2023 - October 2023

Modification and development of the functionality of the site. Bug Fixing. Testing tasks of other developers. Optimizing the site for Google page insights. Code cleaning.

Education

University of Gdańsk

Informatics and econometrics 2018 - 2020

Specialty: IT Applications in Business.
Thesis: Protection of sensitive medical data using Blockchain technology.

Informatics and econometrics 2014 - 2017

Specialty: Economics Informatics.
Thesis: Project of a database application Laguna for a small travel agency.

Languages

Polish	Native
English	B2+
Italian	A2

Competencies

Frontend

Backend

Other: Java, Kotlin, R

Databases

Other: Firebase, PI/Sql

Tools

React: Redux, Jest, Axios, Styled-Components, SASS, Reactstrap, i18n

.NET: Asp.Net Core, Entity Framework Core, BCrypt.NET

Python: Numpy, Matplotlib, BeautifulSoup, Requests

Node: Express.js, Mongoose, Strapi

Other: Linux, Git, GraphQL, Figma

Projects

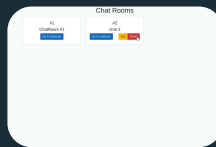

Clonebook

 [code](#)
 [demo](#)

Implementation of Social Network inspired by Facebook. Users' passwords are encrypted. Accounts are authorized by tokens. Current functionalities are: creating accounts, writing and liking posts and comments, searching other user profiles, adding, accepting, and removing friends from the friends list, and using chat.

Tech stack: [Typescript](#), [React](#), [redux](#), [GraphQL](#), [Node.js](#), [Express.js](#), [Mongo](#), [mongoose](#), [styled-components](#), [supertest](#), [bcrypt](#), [jwt](#)

ChatApp

 [code](#)

An application that enables users to chat chatrooms. Upon creating a new account, users can create a new chatroom or join an existing one. If the chatroom is owned by the user, it is possible also to edit it or delete it.

Tech stack: [Typescript](#), [React](#), [reactstrap](#), [redux](#), [ASP.NET Core](#), [Entity Framework Core](#), [BCrypt.NET](#), [PostgreSQL](#), [jwt](#)

Lights out

 [code](#)
 [demo](#)

An implementation of the electronic game in which player must toggle adjacent lights until all of them switched off.

Tech stack: [Typescript](#), [React](#), [Sass](#)

HealthBlockchain

 [code](#)

Implementation for supporting healthcare by enhancing the protection of personal and sensitive patient data. Application supports daily doctor visits by providing functionality of adding new physical examinations and prescriptions, and checking them. Data is stored by using blockchain framework Hyperledger Fabric.

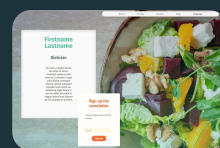

Tech stack: [Hyperledger Fabric](#), [Node.js](#), [TypeScript](#), [React](#), [Material UI](#)

Statistician's blog

 [code](#)

An application that enables users to chat chatrooms. Upon creating a new account, users can create a new chatroom or join an existing one. If the chatroom is owned by the user, it is possible also to edit it or delete it.

Tech stack: [Typescript](#), [React](#), [redux](#), [Next.js](#), [strapi](#), [axios](#)

Lights out

 [code](#)

An implementation of the electronic game in which player must toggle adjacent lights until all of them switched off.

Tech stack: [Vue](#), [pinia](#), [tailwind](#), [strapi](#), [Sass](#)
